Lattice - BL1

Twiss Parameters

Beamlines

+ New Beamline

Name	Description	Length	Bend
BL1	(F,O,D,O)	20.00m	0.0°

Beamline Elements

+ New Element

Name	Description	Length	Bend
DRIFT			
O		8.000m	
QUADRUPO			
D	B_0=-0.07142857142	2.000m	0.0°
F	B_0=0.07142857142	2.000m	0.0°

Beamline Editor - BL1

drag and drop elements here to define the beamline

F O D O

Create BL1 beamline.

8m Drift

2m Quads with

$B_0: 0.07142857142$

and

$B_0: -0.07142857142$

FODO example: Lattice

The screenshot shows the QUADRUPO software interface. At the top, there is a light blue header bar with the text "QUADRUPO" on the left and a help icon (?) and close icon (x) on the right. Below the header, the main content area is titled "Quadrupole magnet". Under this title, there are two tabs: "Main" (which is selected) and "Fringe Fields". The "Main" tab contains several input fields for configuring the quadrupole magnet. The fields are: "Name" (with a text box containing "D"), "Length [m]" (with a text box containing "2"), "Radius at Pole Tip [m]" (with a text box containing "0.1"), "Field at Pole Tip [kG]" (with a text box containing "-0.07142857142"), "Integration Step [m]" (with a text box containing "0.02"), "Alignment" (with a dropdown menu showing "Element Aligned"), "Longitudinal Shift [m]" (with a text box containing "0"), "Transverse Shift [m]" (with a text box containing "0"), and "Z-axis Rotation [rad]" (with a text box containing "0"). At the bottom of the "Main" tab, there is a checkbox labeled "Save Step-by-Step Coordinates and Fields" which is currently unchecked, and a button labeled "No". At the very bottom of the interface, there are two buttons: "Save Changes" (in blue) and "Cancel" (in white).

QUADRUPO

Quadrupole magnet

Main Fringe Fields

Name

FODO example: Bunch

FODO Example: Twiss

FODO Example: Visualization

Copy and Modify a Simulation

A screenshot of the 'Bunch' configuration panel. It has four tabs: 'Particle', 'Distribution' (selected), 'Phase Space', and 'Spin and SR Loss'. The 'Distribution' tab contains the following settings:

- Number of Particles**: 1000
- Match Twiss Parameters**: No
- Probability Density** and **Mean Value** table:

	Probability Density	Mean Value
Y	Gaussian	Y [m] 1.26597732e-8
Y'	Gaussian	Y' [rad] 1.8718702e-9
Z	Gaussian	Z [m] 0
Z'	Gaussian	Z' [rad] 0
X	Gaussian	X [m] 0
D	Exponential	D0 (Bρ/BORO) 1

A screenshot of the 'QUADRUPO' configuration panel. It has two tabs: 'Main' and 'Fringe Fields'. The 'Main' tab contains the following settings:

- Name**: F1
- Length [m]**: 2
- Radius at Pole Tip [m]**: 0.1
- Field at Pole Tip [kG]**: 0.058
- Integration Step [m]**: 0.02
- Alignment**: Element Misaligned
- Longitudinal Shift [m]**: 0
- Transverse Shift [m]**: 0
- Z-axis Rotation [rad]**: 0
- Save Step-by-Step Coordinates and Fields**: No

Buttons at the bottom: 'Save Changes' and 'Cancel'.

Turn off bunch/twiss matching and introduce an error to the F quad field, B_0: 0.058

Copy and Modify a Simulation

Simulation Settings

Beamline: BL1

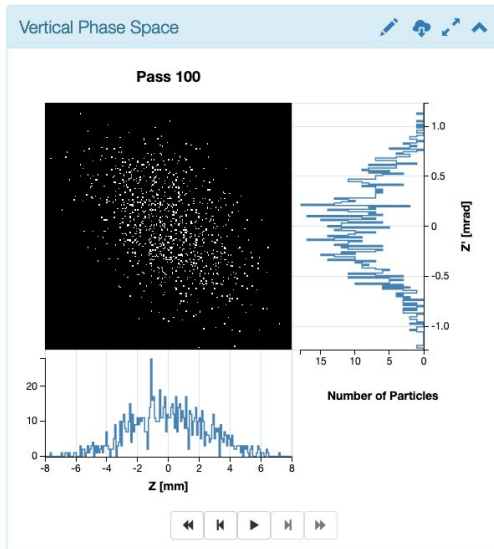

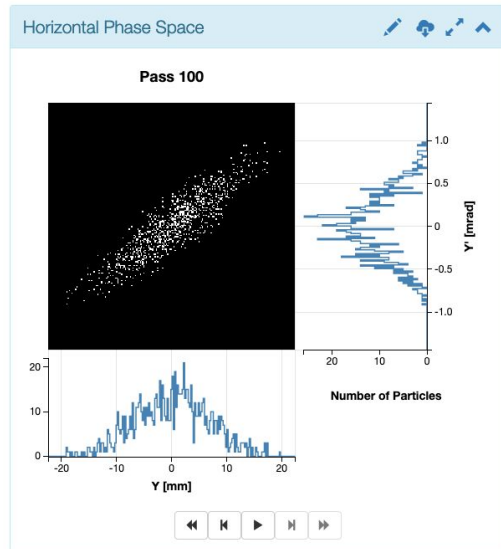

Number of Turns: 100

Diagnostic Interval: 10

Simulation Status

Simulation Completed

Start New Simulation

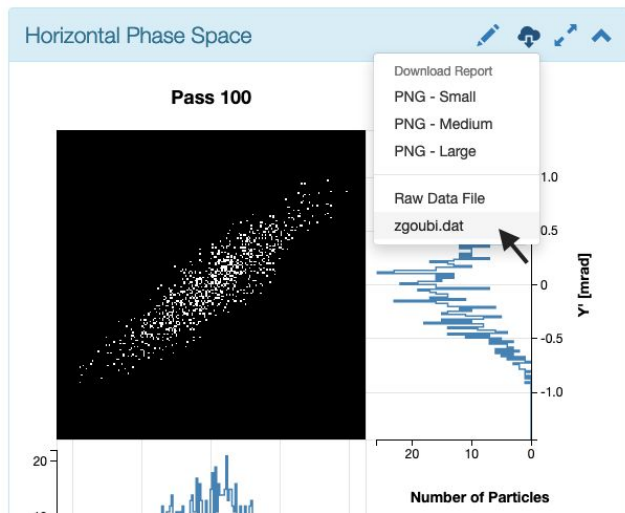

Run the simulation and observe how the bunch's horizontal phase space is no longer uniform across turns.
